## DEFINITIONS

The specifications in the following pages describe the warranted performance of the instrument for 23 ±5 °C after a 30-minute warm-up period (unless otherwise stated).

**Min/Max:** Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

**Typical:** Expected mean values, not warranted performance.

## INTRODUCTION

**Model 835 models comprise a set of very compact, portable analog signal generator models from 9 kHz up to 6100 MHz. A combination of good signal purity, fast switching speed and wide dynamic range makes these units useful for a variety of applications.**

The Model 835 is a series of low-noise and fast-switching analogue signal generators covering a frequency range from 9 kHz up to 4.0, and 6.1 GHz, respectively.

The Model 835 provides full RF signal generator capabilities including OCXO-stabilized low phase-noise signal with micro-Hz frequency resolution, wide and accurately levelled output power range, extensive modulation capabilities, and fast switching. It is targeted for a wide range of applications where a high-quality analogue signal is mandatory, offering an alternative to expensive high-end RF signal generators, where small size and excellent RF performance at an attractive cost is required.

The very compact and rugged design of the Model 835 operates at very low DC power consumption (only 12 watts), with minor heat dissipation and not requiring a noisy fan. This gives the Model 835 a great advantage in laboratories or production test facilities. The low power design allows the use of optional internal battery modules which make it a truly portable instrument, ideally suited for field testing, installation, and maintenance.

Available Options:

- **Option PE3** is an optional power level extension to accurately level below -120 dBm
- **Option B3** adds an internal rechargeable battery module
- **Optional AVIO** adds dedicated avionics modulation like VOR/ILS
- **Option 1URM** modifies form-factor to a 19" rack-mountable 1U enclosure
- **Option EB6** adds an external power bank adapter cable with voltage converter for 12 to 25 V supply

The Model 835 supports various standard interfaces such as USB (USBTMC), LAN (VXI-11), or GPIB and extensive API with programming examples are available.
