

Model 866-M Compact Frequency Synthesizer

Features

- Small size flange-mount module
- CW and pulse modulation
- Low power consumption as low as 23 W, passive cooling

Applications

- System clock source
- Multi-channel phase-coherent configurations for radar signal generation and testing
- Spectroscopy

DEFINITIONS

- The specifications in the following pages describe the warranted performance of the instrument for 23 ± 5 °C after a 30-minute warm-up period (unless otherwise stated).

Min/Max: Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Typical: Expected mean values, not warranted performance.

INTRODUCTION

- The Model 866-M is a compact-size frequency synthesizer for the generation of accurate and stable frequency signals in both CW and pulse form, covering a frequency range of 1 MHz to 40 GHz, with a fast-switching time of 50 µs, an output power of -20 to +25 dBm. The device shows excellent phase noise performance, e.g., at 10 GHz and 20 kHz offset -127 dBc/Hz is measured.

The synthesizer is in a very compact flange-mountable form of 6.5 x 2.4 x 1 inches [165 x 60 x 26 mm], weighs less than 1.3 lbs, and consumes less than 23 W and is only passively cooled. The Ethernet communication port is used for remote connection to a PC for control over GUI software using standard SCPI commands.

The module can receive and provide external references of 100 MHz or 1 GHz. Multiple units can be phase synchronized with one unit acting as the master and the others as slaves, to implement multi-channel PHASE-COHERENT outputs.

The product is suitable for many applications: as low phase noise system clock or reference sources, in the multi-channel phase-coherent configurations for radar, EW, quantum computing, etc.

Installation Instructions

The module relies on passive cooling. It is mandatory to mount the device on a heatsinking surface. Make sure the synthesizer operates under the conditions specified in the datasheet. Otherwise, the thermal protection will turn off the RF output.

Power Connector Assembly

PIN	ASSIGNMENT
1	DC Supply (see also "Power requirements")
2	GND
3	DC Supply (see also "Power requirements")
4	GND

The power connector is a 4 pin, 2.50 mm spaced double-row header. BNC recommends Molex manufactured receptacles 1053081204 and contacts 1053002200 with TPA retainer 1053252002 from its Nano-Fit series.

Reset Functionality

The reset functionality of the device can be used if the device has a wrong configured IP address and cannot be found in the local area network anymore. While pressing the reset button (>2 s), the device will be reconfigured to auto IP addressing mode (DHCP/Zero-conf) and restarts itself. After the device is up and running again, it gets a new IP address and can be discovered by the BNC Signal Generator UI.

ORDERING INFORMATION

866-M	866-M	40 GHz wideband frequency synthesizer module (with AC adapter)
866-M	Option FS	Fast Switching

GENERAL CHARACTERISTICS

Remote Programming Interfaces:

Ethernet

Control language: SCPI Version 1999.0

Power requirements: 24±6 VDC; 23 W maximum

Mains adapter supplied: 100-240 VAC in / 24 V, 2.7 A DC out

Storage temperature range: -40 to 70 °C

Operating temperature range: 0 to 45 °C, non-condensing

Operating and storage altitude: up to 15,000 feet

Safety/EMC complies with applicable Safety and EMC regulations and directives.

Recommended calibration cycle: 24 months
