

Model 871

Single- or Multi-Channel Signal Generator

Features

- Wide & accurately leveled output power range
- Fast switching of 5 µs (option FS)
- Outstanding phase noise, harmonic, and spurious performance
- Sweep, trigger function, and user-programmable external reference frequency from 1 to 250 MHz

Applications

- ATE
- Production testing
- R&D low noise signal source
- Defense & Aerospace

Model 871
1 kHz to 51 GHz

DEFINITIONS

The specifications in the following pages describe the warranted performance of the instrument for 23 ± 5 °C after a 30- minute warm-up period

Typical: Expected mean values, not warranted performance

Min and Max: Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

INTRODUCTION

The Model 871 is a series of phase-coherent, single or multi-channel, ultra-fast switching and ultra-low phase noise signal generators with a frequency range from 1 kHz to 12, 20, 40, and 51 GHz. It is ideally suited for a wide range of applications, where good signal quality, accurate and wide output power ranges, and very stable phase coherence among all channels are required. Outstanding phase noise is combined with good spurious, harmonic rejection and leading-edge switching speed of 5 μ s.

A high-stability OCXO reference provides excellent frequency accuracy and stability. The generator accepts a wide range of external references including the commonly used 10 and 100 MHz for higher phase synchronization, and a flexible reference choice in the range of 1-250 MHz for those applications with customer- or system-specific reference frequencies. Moreover, the Model 871 features a pair of BNC-specific high-frequency CLK ports (3 GHz, one input and one output) that enables excellent phase synchronization among the outputs of multiple BNC instruments with similar ports.

The Model 871 comes in a desktop enclosure (single-channel) or 19-inch 2U (up to 4 channels) rack-mountable module form. It can be intuitively controlled by a PC based GUI Software. Moreover, the instrument offers various communication interfaces like USB, LAN or GPIB. Each interface allows for easy and fast communication using SCPI 1999 command set. Remote control of the instrument can be quickly achieved from any host system. A customer-supplied application programming interface (API) or programming examples for MATLAB, LabVIEW, C++ and other commercially available tools make the control implementation very straightforward.
